

PRABHAV JAIN

AI ENGINEER

Bengaluru — aadimate2004@gmail.com — +91 7898575626 — [LinkedIn](#) — [GitHub](#) — [Portfolio](#)

SUMMARY

AI engineer experienced in shipping AI and full-stack products end-to-end, from architecture and backend systems to agent workflows and deployment. Built multi-agent systems with state, memory, tool calling, RAG, model routing and evaluation, and shipped user-facing platforms as a sole engineer. Comfortable working across TypeScript, Node.js, Next.js, PostgreSQL and Python in early-stage environments.

PROFESSIONAL EXPERIENCE

AI Generalist Intern — Young Founder's School

July 2026 – Sept 2026

- Building AI-powered internal products and workflows across operations, partnerships and team collaboration, working closely with product and growth teams to turn ambiguous requirements into working systems.
- Developed agentic workflows and integrations using TypeScript and Python, with persistent state, API integrations, background processing and AI-assisted automation across internal processes.

Agentic AI Engineer Intern — AegisOps Techlabs Pvt Ltd

Nov 2025 – Apr 2026

- Built and worked a multi-agent AI Ops platform, owning agent architecture, FastAPI services, SSE-based streaming .
- Designed stateful RAG and memory workflows using PostgreSQL, pgvector, OpenAI embeddings and persistent agent context for long-running tasks.
- Added Langfuse observability, retry and timeout handling, guardrails and evaluation workflows to diagnose failures and improve production reliability.

AI Engineer — TapNex (NexGen FC)

Jul 2025 – Nov 2025

- Designed and shipped 4 production platforms for live events as the sole engineer, covering product development, backend APIs, databases, payments and deployment.
- Built full-stack workflows around registration, ticketing, meals and gaming operations using React, Next.js, Node.js and PostgreSQL; integrated Razorpay and Cashfree, reducing manual processing by 70%.

PROJECTS

AI Training & Placement Platform — AI Engineer (Client Project)

- Built the AI layer for a platform targeting 8,000+ users with 8 specialized agents, including resume analysis, learning paths, syllabus parsing, risk detection and natural-language routing across downstream agents.
- Implemented the agent backend with TypeScript, NestJS, PostgreSQL, Redis and BullMQ, including tool execution, persistent state, model routing and asynchronous workflows.
- Added LLM-as-Judge evaluation, task-success tracking, Langfuse observability and audit logging to test agent behavior and catch regressions.

AI & Communication Systems — AI Engineer

- Built conversational agents over WhatsApp and email workflows, including thread-aware context, automated follow-ups and tool-driven actions across user conversations.
- Worked with realtime AI pipelines using WebSockets and SSE, including streaming model responses and voice workflows with STT, LLM and TTS components.

AI Interviewer System

[GitHub](#)

- Built a stateful real-time interview system using LangGraph and Gemini Live with session memory; an asynchronous auditor evaluates the session without blocking the interview flow.
- Generates structured candidate reports with scores, gap analysis and recommendations from resume, role and conversation context.

Autonomous Research Agent

[GitHub](#)

- Built a supervisor-worker agent system using a 9-state workflow, dynamic tool calling, confidence checks and controlled retries for multi-step research tasks.

TECHNICAL

Languages: TypeScript, Python, JavaScript **Frontend:** Next.js, React, Tailwind CSS

Backend: Node.js, NestJS, FastAPI, REST, WebSockets, SSE **Data:** PostgreSQL, Redis, pgvector

AI: Mastra, LangGraph, LangChain, RAG, tool calling, agent memory, model routing **Infra:** Prisma, Bun, BullMQ, Docker, Vercel, GCP, AWS

EDUCATION

B.Tech CSE (AI & ML) — Jain Deemed-to-be University, Bengaluru

Expected May 2027

CGPA: 7.51/10
